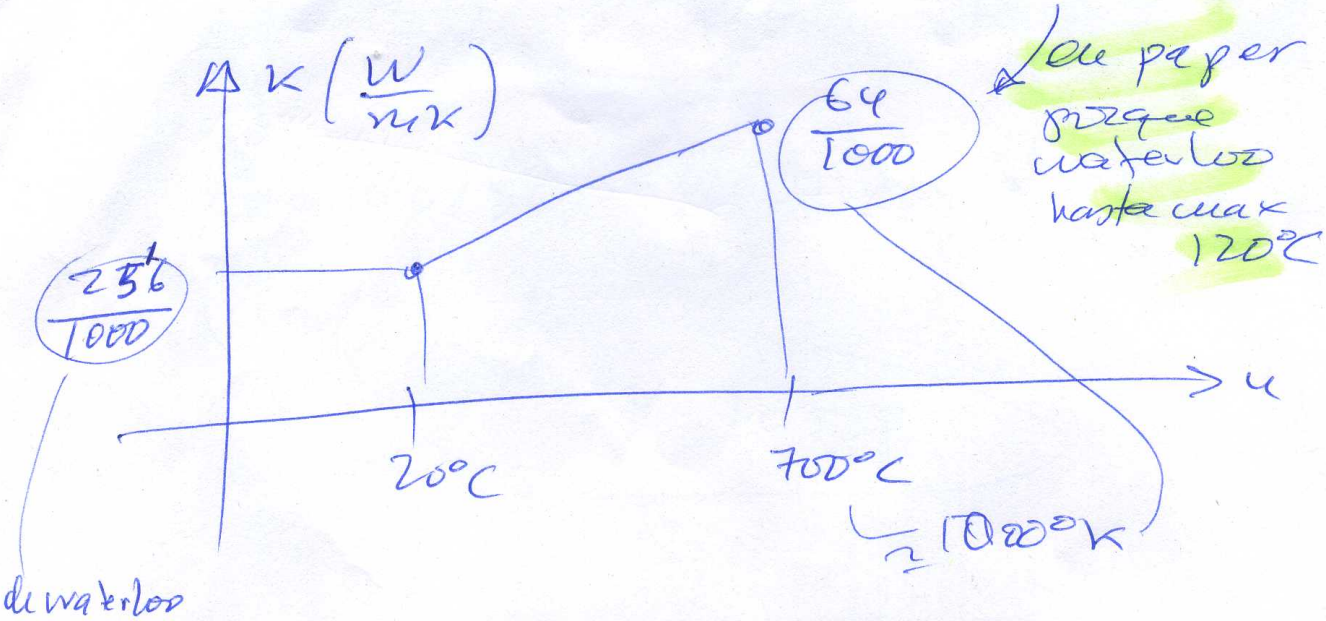
K aire entre 0°C y 700°C



$$K = K_0 + K_1 u$$

$$\frac{25'6}{1000} = K_0 + K_1 \cdot 20$$

$$\boxed{25'6 = 1000 K_0 + 20000 K_1} \quad (1)$$

$$\frac{64}{1000} = K_0 + K_1 \cdot 700$$

$$\boxed{64 = 1000 K_0 + 700.000 K_1} \quad (2)$$

(2) − (1) $\quad 64 - 25'6 = 680.000 K_1$

$$\boxed{K_1 = \frac{64 - 25'6}{680.000}} = 0'000056470$$

$$K_0 = \frac{25'6}{1000} - K_{\lambda 20}$$

$$K_0 = 0'0256 - 0'001129412$$

$$K_0 = 0'024470588$$

$$\boxed{K = 0'0244706 + 0'000056471 \cdot u}$$

Comprobacion

para $\boxed{u = 20°C \rightarrow \quad K = 0'0256}$

$\boxed{u = 700°C \rightarrow} \quad \boxed{K = 0,064}$
